Wireframe diagrams to illustrate UXP

Users, within both VALEN for Families & VALEN for Partners platforms interact visually through a 3D heliocentric system

VALEN is the central entity around which users activate functional clusters and their related operational satellites

The heliocentric system functionality is universal to the entire VALEN UXP, used for both data retrieval and presented within VALEN's needs-based philosophy through numerous sub-portals, including V Reports, or data entry through a Needscoping sub-portal.
